

BRISTOL

INCOSE UK Local Group

Presents...

“Nuclear Power - how can a systems approach help?”

This event will explore the interface between civil nuclear power & system engineering in an “Any Questions?” style format with a panel of three speakers representing some of the different perspectives on system engineering and nuclear power, with panellists expected from the Office of the Nuclear Regulator, EDF Energy and the SE research community (in the shape of Paul Davies, visiting professor to Loughborough University, Head of Innovation at Thales, and past INCOSE UK President).

In order to make this event format effective, we are keen to solicit questions from the audience in advance. Suggested questions should be sent by email to Colin Brain at cjb@sevalidation.com before the 9th May to allow the panellists the opportunity to prepare their responses. Such questions could be along the lines of “Are the major system risks and assumptions different for nuclear power?”, or “What is 'Plan B' if there are too few engineers to support future nuclear aspirations?”

Wednesday 23rd May 2012 – 6.30pm for 7pm till 9pm

Room 1N05, University of the West of England (UWE), Frenchay Campus, Bristol

NON-MEMBERS WELCOME

As with all local group events the main purpose of the evening is to allow INCOSE members (and potential new members) to meet, ask questions and share their views on the chosen topic. *Refreshments available.* For more information, please visit: www.incoseonline.org.uk

Attendees are recommended to meet up in the breakout area next to the room.
